SHIPPING: Stock Color orders can typically be shipped within 5 days; Optional Color orders within 10 days;

NOTES: The In-Stock Panel System is designed for applications where the baseboard heating unit can accept a fixed-length retrofit section. The wall area with the installed baseboard must have open wall space to the left and/or right sides of the existing unit so that replacement panel lengths will be long enough to cover the heating unit and short enough to fit within the available wall opening. **Radiant Wraps** are rigid, self-supporting sections that can be extended indefinitely beyond the length dimensions of the existing baseboard unit. These extended lengths may require notching or modification to the existing wooden base moldings; extensions over 6" may require the use of mounting brackets. Please check door swing clearances when a considering length extensions. **Radiant Wraps** mounting brackets are available for installations where the original enclosure is missing or has been removed.

- * Check all original end caps that butt up to an intersecting wall. Please select Open Left or Open Right End Caps when the plumbing run continues horizontally into the interesting wall.
- ** Optional Extra Wide End Caps and Splice Plates are available to extend the In-Stock System length ranges.
