BAY WINDOW CORNER INSTALLATIONS

#1 – The retrofit of a non-90 degree corner requires the use of a Radiant Wraps' measuring gauge to determine the final length of each intersecting panel.

#2 – The positioning of the two intersecting panels (determined by the measuring gauge) will allow for the left and right open end caps to create the new corner.

#3 – The right open end cap will be installed.

#4 – The left open end cap will be installed tight to the right open end cap.

#5 – Once the corner joint is created, a template of rigid cardboard must be provided to Radiant Wraps for us to make the custom top rail wedge piece.

#6 – A finished non-90 degree corner. Please allow 30-days for Radiant Wraps to fabricate the custom top rail wedge piece.
